

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

وَقُلْ اَعْمَلُوا فَسَيَرَى اللَّهُ عَمَلَكُمْ وَرَسُولُهُ وَالْمُؤْمِنُونَ وَسَتُرَدُّونَ اِلَىٰ عَالَمِ الْغَيْبِ وَالشَّهَادَةِ فَيُنَبِّئُكُمْ بِمَا

كُنْتُمْ تَعْمَلُونَ [التوبة : ١٠٥]

Innovation design of four axis router machine module

Graduation Project Report

Mechanical Engineering Department,

Faculty of Industrial Education, Beni-Suef University

Under the supervision

Dr.

□ *AHMED EBRAHIM*

□ *MUSTAFA MAHMOUD*

Beni-Suef, 2019

Graduation Project Team

- Moustafa Mahmoud Elsayed
 - Amr Khalid Nabeah
 - Ebrahim Sobhi Sayedahmed
- Mohammed Abd-Elmaneem Mohammed

5

Conclusions

- ❖ Numerical control is a method of automatically operating a manufacturing machine based on a code of letters, numbers, and special characters.
- ❖ The numerical data required to produce a part is provided to a machine in the form of a program, called *part program* or *CNC program*.
- ❖ The program is translated into the appropriate electrical signals for input to motors that run the machine.

Why Use CNC Machines?

- ∞ Increase production throughput
- ∞ Improve the quality and accuracy of manufactured parts
- ∞ Stabilize manufacturing costs
- ∞ Manufacture complex or otherwise impossible jobs -2D and 3D contours

Conclusions

A CNC router is very similar in concept to a CNC milling machine. Instead of routing by hand, tool paths are controlled via computer numerical control. The CNC router is one of many kinds of tools that have CNC variants.

A CNC router typically produces consistent and high-quality work and improves factory productivity. Unlike a jig router, the CNC router can produce a one-off as effectively as repeated identical production. Automation and precision are the key benefits of CNC router tables.

The motors

Stepper Motors

The motors are the heart of any CNC machine. The size and type of motor can define a CNC routers precision, speed, and accuracy. There are two primary classes of motors used on CNC machines, stepper motors and servo motors. Within these two classes there are several types.

The drivers

This Step motor controller uses the L297 and L298N driver combination; it can be used as standalone or controlled by microcontroller. It is designed to accept step pulses at up to 25,000 per second.

G Code

The "instructions" read by CNC machines are usually a human readable format called G-Code. The machine is set up with a base unit, like Inch or mm, and a command of G01 X500 Y200 Z100 on a metric mm setup tells the machine it needs to move

500 units on the X axis and 200 units on the Y axis and 100 on z axis.

Software-mach3

The screenshot displays the Mach3 CNC Control software interface. At the top, there are menu tabs: Program Run Alt-1, MDI Alt-2, ToolPath Alt-4, Offsets Alt-5, Settings Alt-6, and Diagnostics Alt-7. The main window shows the following components:

- Program Run Area:** A text area containing G-code:

```
F60.000000
G0 X0.000000 Y0.000000 Z0.2000
M3
S60.000000
G43H5
```
- REF ALL HOME:** A vertical column of buttons for zeroing the axes.

Zero X	+0.0000	Scale +1.0000
Zero Y	+0.0000	Scale +1.0000
Zero Z	+0.0000	Scale +1.0000
Zero 4	+0.0000	Radius Correct
- Machine Status:** Buttons for OFFLINE, GOTO Z, Machine Coord's, and Soft Limits.
- File Path:** File: C:\Mach3\GCode\roadrunner.tap
- Control Panel:**
 - Left Column:** Cycle Start <Alt-R>, Feed Hold <Spc>, Stop <Alt-S>, Edit G-Code, Recent File, Close G-Code, Load G-Code, Set Rest Line, Line: 0, Run From Here, Flood Off.
 - Right Column:** Rewind Ctrl-W, Single BLK Alt-N, Reverse Run, Block Delete, M1 Optional Stop (checked), Flood Off.
- Tool Information:**
 - Tool: 0
 - Dia: +0.0000
 - H: +0.0000
 - Buttons: Auto Tool Zero, Remember, Return.
 - Elapsed: 00:00:00
 - Jog ON/OFF Ctrl-Alt-J
- Feed Rate:**
 - FRO: 60.00
 - F: 60.00
 - 100%
 - Units/Min: 0.00
 - Units/Rev: 0.00
 - Buttons: +, -, Reset.
- Spindle Speed:**
 - Spindle CW FS
 - RPM: 0
 - S: 0
 - Increment: 33
 - Buttons: +, -, Reset.
- Bottom Panel:**
 - Buttons: Dwell, CV Mode, Reset, G-Codes, M-Codes, - Program Run.
 - History, Clear, Error: (empty)
 - Profile: Mach3Mill

Conclusions

CNC means computer numerical control machine it's a form of programmable automation drill drawings on wood and metal use G- coding consist of 4 motors and their drivers and mach3 with its basic circuit and body made of wood and metal hold on motors , drill and the materials we want to draw on them.

We tried to make cheap fast safety cnc machine that drill on material piece according to any drawing we draw to it.

Thanks for your Attention
